

CAESimEquip

Deliver cost-effective training with simulated medical equipment

## Simplify and enhance your simulation training capabilities, with or without a patient simulator

CAE SimEquip expertly simulates a variety of medical devices for realistic and reliable hands-on training at an affordable price. Instructors can now expand the variety and complexity of Simulated Clinical Events (SCEs) in both prehospital and in-hospital environments, providing experiences to obtain skills required for effective healthcare delivery.

SimEquip incorporates simulation scenarios into simulated medical equipment for hands-on training in advanced scenarios such as resuscitation, ventilation and anesthesia.

Available in **Standalone** and **Maestro Add-on** configurations.

Medical Simulator  
INNOVACIÓN EN EDUCACIÓN

CAE Healthcare's SimEquip training solution allows clinical learners to practice device operation and patient monitoring skills in a safe environment. The equipment easily integrates with adult CAE Maestro patient simulation scenarios for enhanced training. Here are a few of the proficiencies CAE SimEquip offers.

### CAE SimEquip Defibrillator

- Monitor and interpret patient vital signs
- Deliver electrical therapy to a simulated patient (prehospital or in-hospital)
- Configure a defibrillator

### CAE SimEquip Transport Ventilator

- Manage ventilation of a simulated patient being transported
- Configure a transport ventilator
- Troubleshoot transport ventilator issues

### CAE SimEquip Ventilator

- Manage ventilation of a patient with normal and abnormal lung mechanics, and other respiratory conditions
- Monitor a ventilated patient and interpret data
- Configure a ventilator
- Troubleshoot ventilator issues

### CAE SimEquip Anesthesia

- Monitor a patient under anesthesia and interpret data
- Manage ventilation of a patient under anesthesia
- Operate and configure an anesthesia machine
- Troubleshoot ventilator issues
