

## New CAE Distance Learning Suite for Nursing

### Virtual Learning Solution for Today's Nurse Education Programs

Nursing education is at a turning point, with the closure of schools, reduction of clinical sites and loss of opportunities for in-person group learning. Now is the time to rebuild and rejuvenate your educational curriculum.

Accelerate the journey to competence for tomorrow's nurses with CAE Healthcare's new distance learning suite for back-to-school or hospital-based programs. The combination of virtual classroom and hands-on, self-directed learning will assist learners with the integration of theory and practice into their development of cognitive and motor skills.

#### CAE Distance Learning Suite for Nursing includes:

- CAE Maestro virtual patient license, an integrated, cloud-based platform that enables real-time virtual simulation training from anywhere, any device with content from CAE's Program for Nursing Curriculum Integration (PNCI).
- Two MultiPads, a hands-on clinical simulation pad for learners to practice essential clinical skills, including venipuncture, tracheostomy care and urinary catheterization.
